FILTER MAINTENANCE

QUICK FAQ

HOW DO I KNOW WHEN MY FILTER IS DIRTY?

If water flow slows down or your pressure gauge rises 8–10 PSI above normal, it's time to clean.

HOW OFTEN SHOULD I CLEAN MY POOL FILTER?

Quad cartridge filters: Clean once per quarter (4 times per year).

Single element cartridges: Clean monthly during swim season, or every 6 weeks when not in use.

WHEN SHOULD I REPLACE MY FILTERS?

Single element cartridges: Replace every season.

Quad cartridge filters: Replace every 3–4 seasons. Frequent, thorough cleaning helps them last even longer.

MOST POOL PROBLEMS BEGIN WITH A CLOGGED FILTER

Try adding one more filter cleaning per season. For example, if you normally clean twice per year, try three times. This improves water quality, reduces chemical usage, and lowers strain on your pool pump, helping reduce energy costs. Using the Cyclone Filter Cleaner encourages timely cleaning and helps extend filter life by getting cartridges as clean as possible every time.
